  <speaker>JEPPE.</speaker>
  <p>Har du lagt Mester Erich fra dig Nille?</p>
</sp>
<sp>
  <speaker>NILLE.</speaker>
  <p>Ja jeg har, men jeg veed strax hvor hand er at
finde igien, dersom du icke er hørtig. Her hid! see
hvor hand kryber. Her hid! du skal til Byen at købe
mig to Pund grøn Sæbe; see der har du Penge
dertil. Men hør! hvis du inden fire Timer icke er her
paa Stædet igien, da skal Mester Erich dantze Polsk
Dantz paa din Ryg.</p>
</sp>
<sp>
  <speaker>JEPPE.</speaker>
  <p>Hvor kand jeg gaae fire Miil i fire Timer Nille?</p>
</sp>
<sp>
  <speaker>NILLE.</speaker>
  <p>Hvem siger du skal gaae? du Hanrej! du skal
løbe. Jeg har engang sagt Dommen af, gjør nu hvad dig
lyster.</p>
</sp>

# The ecology of the bibliographic record

# Libraries & Users

- collect
- preserve
- organize
- provide access

- find
- identify
- select
- obtain access

# quite a few problems

- we have many more domains than can afford, i.e., the price of digital branding is high
- we have too many applications for us to maintain
- we have far more metadata element set than is necessary, i.e., one per application
- we have relied far too much on the OPAC for dissemination of digital objects
- we've been lacking efficient descriptions of document structure and we've not used them efficiently when we have them

# Red Queen Economy

*'Well, in OUR country,' said Alice, still panting a little, 'you'd generally get to somewhere else - if you ran very fast for a long time, as we've been doing.'*

*'A slow sort of country!' said the Queen. 'Now, HERE, you see, it takes all the running YOU can do, to keep in the same place. If you want to get somewhere else, you must run at least twice as fast as that!'*

# if the problem...

- if the problem is a nail, then the tool is a hammer
- if the problem is a screw, then the tool is a screwdriver

then, if I just have a hammer, are then all problems nails????

- if you need a book, use bibliographic search
- if you need information, use information retrieval, e.g.,  
google

# MODS

metadata object description schema mods is a standard for bibliographic metadata with about as high granularity of description as MARC but more expressive as regards relations between objects

is assumed to be RDA compliant

# mets

metadata encoding & transmission standard, mets is a standard for structural metadata which is as useful for search and navigation system requires as for logical description of complex objects for digital preservation
